

Bass Highway Leith Overpass Project

Overpass Concept Designs from 2018

The project team developed three concept designs for the location of an overpass. These concept designs were presented to the community through Social Pinpoint (an online consultation tool) for their information and feedback.

Leith Road to Bridge Street

This concept design requires land acquisition, does not impact on any buildings, but would require relocation of accesses and some vegetation removal.

Following feedback from the consultation, the overpass concept design was revised to include ramps that would reduce the amount of traffic travelling through local roads in Leith.

Allport Street (East) to Casey Street

This option would require significant land acquisition from properties along Braddons Lookout Road and Casey Street as well as increased vegetation removal. The steepness of Braddons Lookout Road may also be impractical for heavy vehicles.

Allport Street (West) to Allport Street (East)

This option would require significant land and building acquisition of properties along Allport Street (East) and Allport Street (West) and increased vegetation removal.
