

Introduction;

This SIB has been developed to provide vehicle examiners, certifiers and proprietors with information regarding vehicles that are subject to a recall in relation to Takata airbags.

Background;

A number of recalls have been announced in Australia for motor vehicles containing Takata airbags. These recalls affect a large number of car makes and models and a small number of motorcycles and trucks.

There have been serious injuries and deaths from vehicles with faulty Takata airbags. The inflator components in Takata airbags may deteriorate and subsequently misdeploy in an incident, with the result of metal fragments from the inflator housing propelling out of the airbag, causing injury or death to the drivers/riders and/or passengers.

All makes and models that are currently affected by the Takata recalls can be found on the link below. A summary of the affected vehicles is also contained in the following pages of this bulletin. Consumers are strongly urged to check whether their vehicles are included in the recall by checking the list, or contacting the dealership or the vehicle manufacturer.

Actions;

If examiners become aware of an affected vehicle that is part of this recall, we request that they advise the owner to contact their local vehicle dealer if they have not already had the airbag assembly replaced. Failure to have the recall actioned is not a reason for rejection.

For up to date website recall information relating to this issue, refer to;
